Leviat®
A CRH COMPANY

We imagine, model and make engineered products and innovative construction solutions that help turn architectural visions into reality and enable our construction partners to build better, safer, stronger and faster.

Leviat is a world leader in connecting, fixing, lifting and anchoring technology.
From the build of new schools, hospitals, homes and infrastructure, to the repair and maintenance of heritage structures, our engineering skills are making a difference around the world.

We provide technical design assistance at every stage of a project, from initial planning to installation and beyond.
Our technical support services range from simple product selection through to the development of a fully customised project-specific design solution.

Every promise we make locally, has the commitment and dedication of our global team behind it. We employ almost 3,000 people at 60 locations across North America, Europe and Asia-Pacific, providing an agile and responsive service worldwide.

Leviat, a CRH company, is part of the world’s leading building materials business.

Leviat is the home of:

**Ancon**
Stainless steel support and restraint fixings for masonry cladding, engineered concrete connections and reinforcement continuity systems.

**Aschwanden**
Innovative concrete connections including lean, high strength steel-concrete composite columns and a comprehensive range of acoustic products.

**Connolly**
Dowel and continuous-pour jointing systems for slab-on-ground applications, such as pavements and industrial concrete floors.

**HALFEN**
Comprehensive range of anchoring, reinforcing, framing and façade fixing technology, for both construction and industrial applications.

**HELIFIX**
Innovative helical wall ties, fixings and masonry repair systems offering concealed, non-disruptive installation techniques.

We imagine, model and make engineered products and innovative construction solutions that help turn architectural visions into reality and enable our construction partners to build better, safer, stronger and faster.
Superior jointing systems for industrial concrete floors typically featuring armoured edge protection to reduce maintenance in high traffic areas.

Comprehensive portfolio of engineered construction accessories and safety products for the precast, tilt-up and cast-in-place concrete industries.

Wide selection of mechanical rebar splicing technology, precast accessories and post-tensioning systems.

Engineered masonry and concrete connections, plus reusable and lost formwork solutions and building site accessories.

Insulation systems for use in precast, tilt-up and cast-in-place concrete building envelopes, designed for enhanced energy-efficiency and thermal performance.
With five locations across Australia, and two in New Zealand, Leviat can assist with the specification, design, detailing and scheduling of a complete fixing solution for your project from our extensive range of trusted brands.

Our products are precision-manufactured to perform in the most demanding concrete and masonry applications, and are trusted for their integrity, reliability and compliance.

Our experienced technical specialists work closely with developers, architects and structural engineers to ensure that our products meet the demands of today’s most challenging construction programmes, while complying with new and emerging Australian Standards.

The advanced manufacturing facilities that we operate from meet the requirements of AS/NZS ISO 9001:2016. Our agile manufacturing processes enable us to respond quickly to fulfil urgent high-volume orders and meet challenging deadlines.

Our business is structured around meeting customer requirements efficiently and cost effectively. Our customer service professionals and extensive distribution network enable us to deliver the products that customers need, just when they’re needed.

Contact us for help with your project requirements, from correct product selection to a fully customised design solution.

---

**Products for Structural Concrete**

Engineered concrete connections from the Ancon range include high performance shear connectors, threaded and bolted reinforcing bar couplers and reinforcement continuity systems.

**Products for Precast Concrete**

Our product portfolio comprises edge lifting systems, lifting loops and cast-in threaded inserts to ensure safe, fast and efficient handling of a wide range of precast concrete elements.

---

**Products for Anchorage to Concrete**

Leviat offers a wide range of intelligent fastening solutions as alternatives to drilling or welding. The Halfen range provides the ideal channel for every application, whether for elevator shafts, tunnels, stadiums or precast concrete construction.

---

**High Integrity Fixings**

Leviat has a wealth of experience of working with various types and grades of stainless steel, and can produce special fabrications to suit individual customer requirements in a variety of industries.

---

**Products for Masonry Repair**

Helifix repair and reinforcement products, with their concealed non-disruptive installation techniques, help to preserve our built environment and strengthen existing masonry structures.
Products for Structural Concrete

Ancon DSD Shear Load Connector

Ancon Shear Load Connectors
Installed at expansion and contraction joints, Ancon Shear Load Connectors are more effective at both transferring load and accommodating movement than plain dowel bars. Each connector is a two-part assembly, comprising a sleeve and a dowel component. Products are available for joints in ground bearing and suspended slabs. Our free design software is available to download from the website.

Ancon Lockable Dowels
The range includes a unique lockable dowel designed for use at temporary movement joints in post-tensioned concrete frames.

Ancon Punching Shear Reinforcement
This Ancon Shearfix System consists of double-headed studs welded to flat rails. It is used within a slab to provide additional reinforcement around columns, protecting the slab from the effects of punching shear. Our free design software is available to download from the website.

Accommodating Shear

Ancon Lockable Dowel

Design Software available
Ancon BT Reinforcing Bar Couplers

The Ancon BT system is one of the smallest and the most cost-effective coupler systems in our range, when used on large scale, high coupler volume projects. The ends of the bars are enlarged and a parallel thread is cut onto the ends to suit the threaded coupler. The coupler is assembled using a pipe or chain wrench. Calibrated wrenches are not necessary.

Ancon Reinforcement Continuity Systems
Ancon Keybox consists of pre-bent bars housed within a galvanised steel casing. Once installed, the protective cover is removed and the bars are straightened.

Ancon KSN Anchors with BT threaded reinforcing bars can simplify concrete design at construction joints, typically in slab-to-wall applications. The anchor is cast into the face of the concrete wall. When the formwork and thread protection is removed, the reinforcing bar is screwed into the anchor.

Ancon KSN Anchors are also available in a galvanised steel casing to provide a shear key (Ancon KSN Anchor Box) or a reusable plastic mould (Ancon KSN Anchor Block). Continuity of reinforcement can be also be provided by the installation of an Ancon Coupler Box. These boxes combine standard Keybox casings with the Ancon BT mechanical splicing system.

Moment Grout Couplers
Moment Grout Couplers can be used either for precast or in-situ connections where additional tolerance is needed and the reinforcing bars cannot be threaded or prepared. They consist of a sturdy one piece steel sleeve, which is filled with a high strength, flow-able, shrinkage equalised grout to provide a bond between the starter bar and the grout coupler sleeve.

Contact us: 1300 304 320 | info.au@leviat.com
Products for Precast Concrete

**Ancon Unilift Lifting System**
Unilift Locking Klaws and spherical head anchors are the ideal lifting and handling system for a wide variety of precast concrete products, particularly in civil engineering applications.

**Ancon EdjPro Edge Lifting System**
The Ancon EdjPro system is ideal for lifting thin factory cast panels where a high finish is required, typically visible and exterior walls. Use of the EdjPro system ensures panels remain in their perfect factory-cast condition, avoiding remedial work and lowering overall costs. The range comprises four lifting anchors with working load limits of 4, 8.5, 10 and 15 tonnes in tension.

**Ancon QwikFoot and QwikFix Threaded Inserts**
A wide range of cast-in inserts are available, which provide a metric thread fixing point in precast concrete panels. They are available in thread sizes from M12 to M24 in either zinc plated, hot dip galvanised or stainless steel. Chairs are available to simplify installation by keeping the unit stable during casting.

**Ancon LinkPro Loops**
LinkPro fibre-cored/steel-cored lifting loops facilitate the safe and efficient handling of large precast reinforced concrete units, including bridge and shell beams.
Reinforcement

Ancon MuscleStart Socket Bars
This is a starter bar system which provides a full bar strength joint for precast concrete panels and floors.

Ancon QwikMag Magnetic Clamps
These high strength magnetic clamps lock firmly in place on steel casting beds to hold formwork in position and help create consistent straight edges to precast concrete panels.

Halfen HEK Precast Connectors
The Halfen HEK Precast coupler is an innovative and versatile solution for fast and easy connection of precast concrete elements. Cast-in threaded inserts, i.e. Ancon QwikFoot, transfer the tension and shear force into the precast element. The main advantage of the system is the fast and efficient positioning of precast elements. The connection can be subjected to load immediately after installation, which results in a substantial improvement in construction time.

Halfen HCC Column Shoes
Halfen HCC Column Shoes, when used in conjunction with HAB Anchor Bolts, are a fast and efficient means of connecting precast concrete columns to foundations.

CCL Pre-stressing Accessories
Open grips, double-ended joints and spring loaded anchors
Reliable pre-stressing products. Batch marked for full traceability.
Products for Anchorage to Concrete

Fixing Systems

Halfen Anchor Channels
When fixing to concrete, Halfen Anchor Channels provide almost unlimited adjustment along the line of the channel and can eliminate expensive site drilling. Halfen Anchor Channels are available in hot dip galvanised steel or stainless steel, depending on the level of corrosion resistance required.

Halfen HTA Anchor Channels
Halfen HTA Anchor Channels with smooth lips, used in conjunction with Halfen HS T-Bolts, resist tension loads and shear loads in the direction perpendicular to the longitudinal axes of the channel. Halfen HTA Anchor Channels hold a European Technical Assessment and comply with AS 5216:2021.

Halfen HZA Serrated Anchor Channels
Halfen HZA Serrated Anchor Channels with toothed lips, used in conjunction with Halfen HZS T-Bolts, provide resistance in all directions including the longitudinal axes of the anchor channel. Halfen HZA Toothed Anchor Channels comply with the latest revision of AS 5216:2021.
Elevator Accessories

Halfen HLX Lift-Box

The increasing importance of scaffold-free elevator installation requires attachment points cast into the ceiling of concrete shafts for temporary attachment of various loads.

The Halfen HLX Lift-Box makes this possible, providing a safe, temporary fixing point for hoisting apparatus, speed governor/limiter, motor and other equipment during initial installation and subsequent maintenance of an elevator.
Products for Slab-On-Ground Applications

Floor Joint Solutions

Connolly EXJ Expansion Joint System
The EXJ Expansion Joint System is a continuous pour solution for expansion joints in slab-on-ground applications.

Connolly Universal Dowel Sleeves
Universal Dowel Sleeves are available for round and square dowels to allow for load transfer across joints in slab-on-ground applications. The patented twist-fix feature and integrated support leg assist with accurate dowel alignment.

Connolly Biscuit Plate Dowels
Biscuit Plate Dowels and Sleeves are designed to transfer loads across construction joints in slab-on-ground applications.

Connolly Dowel Cradles
Dowel Cradles are used for load transfer in saw cut contraction joints. They are a welded wire assembly that ensures the horizontal and vertical alignment of dowels at the correct spacing and height.

Connolly Key Joint
Connolly Key Joints are a roll-formed galvanised steel section used as a leave-in-place formwork system to control shrinkage induced cracking. The profile is fixed in place using our patented peg and wedge system.

Connolly Straight Up Contraction Joint
The Connolly Straight Up Contraction Joint is a continuous pour solution for contraction joints in slab-on-ground applications.
Isedio ArmourJoint
ArmourJoint is a leave-in-place formwork, load transfer and edge protection joint system suitable for heavy duty industrial concrete floors.

Isedio GuardJoint
GuardJoint adds to the ArmourJoint features, a disruptive face top plate and continuous anchor wings, providing silent, smooth wheel travel across joint openings up to 25mm. Suitable for heavy duty industrial concrete floors.

Isedio ShieldJoint
ShieldJoint builds on the value of GuardJoint, adding a sealant-free joint design to the list of features, making it the ultimate in slab edge protection. Suitable for heavy duty industrial concrete floors.

Isedio SteelDeckJoint
SteelDeckJoint is a revolutionary floor joint solution, which solves many of the deficiencies and time consuming elements of forming a construction joint on a steel deck floor using timber formwork.
High Integrity Fixings

Tension & Compression Systems

In addition to providing a high load capacity, these stylish Ancon systems meet the demanding aesthetic requirements of today’s architectural applications. Both systems are available in carbon and stainless steel in a variety of sizes and finishes including hand polished.

Components combine to create fixing solutions for staircases, canopies, timbers and large areas of glazing.

Tension Systems comprise high strength bar, fork connectors, locking nuts, couplers and anchor discs.

Compression Systems comprise high strength tubes, fork connectors and locking nuts.
**Stainless Steel Reinforcement**

**Reinforcing Bar**
Leviat supplies stainless steel plain and ribbed bar direct from stock. Bars can be supplied cut to length, bent and threaded to suit any application.

**Stainless Steel Fabrications**

Leviat has a wealth of experience of working with various types and grades of stainless steel, and produces special fabrications to suit individual customer requirements. Both one-off and volume orders have been supplied to various industries such as Building, Infrastructure, Water Treatment, Nuclear and Mining.

Leviat has an impressive project portfolio in the Tunnelling Industry and is an ASSDA Specialist Fabricator.

Tunnel Ceiling Suspension Systems

**Lindapter Weld-Free Steel Connectors**

Leviat distributes Lindapter products in Australia. The range includes Hollo-Bolt™, girder clamps, rail clips and floor fixings.
Ancon masonry support systems facilitate horizontal movement joints and also enable architectural features to be created including large openings, concealed soffits and stepped façades. Our engineered solutions ensure support angles are cost effective and negate the need for cutting and waste on site. Ancon masonry support systems and lintels are manufactured from stainless steel and are suitable for all Australian durability classes without any further corrosion protection.

Ancon Lintels

The Ancon lintel range suits the majority of wall constructions and load conditions. Special lintels can be manufactured to suit architectural features and non-standard applications.

Ancon Channel & Bolt Fixings

A wide range of channels and bolts are available to fix stainless steel masonry supports and restraints to any type of structural frame.
Masonry Restraints

Ancon Wall Ties & Restraint Fixings

Ancon manufactures wall ties in a variety of lengths and types for restraining brick, block and stone. These restraints can be designed to fix to concrete, structural steel and timber as well as any type of masonry.

In addition to cavity wall ties, products include head restraints for use at the top of internal walls, wall starter systems comprising a channel and ties, and debonded ties for vertical movement joints.

Strengthening Masonry Panels

Ancon Windposts & Bed Joint Reinforcement

Ancon Windposts span vertically between floors. Profiles include channel and angle sections. They are designed to suit specific applications and are supplied complete with all end connections and wall ties.

Ancon AMR steel ladder-type reinforcement locates in the bed joint to strengthen wall panels against lateral loads.
Products for Masonry Repair

**Helical Wall Ties, Fixings & Masonry Repair Systems**

**Strengthening and Stabilising Masonry**
HeliBar is a helical stainless steel reinforcing bar, with substantial tensile properties, used for strengthening and stabilising masonry in both new build and remedial situations. Helibars can be used to form masonry beams that secure large areas of masonry, distributing the structural loads and overcoming various problems caused by foundation movement.

**Crack Stitching Systems**
The Helifix Crack Stitching system repairs and stabilises cracked masonry using stainless steel HeliBars bonded into cut slots with HeliBond grout for a quick, simple, effective and permanent solution.

**Remedial Wall Ties**
Remedial wall ties are installed to tie masonry leaves together or veneers to internal structural frames. The Helifix range offers a solution for all situations and materials including ResiTies and BowTies.

**Mechanical Pinning Systems**
Helifix DryFix is a versatile and rapidly installed mechanical pinning and remedial tying system that requires no resin, grout or mechanical expansion. DryFix ties are installed directly into the brick leaves.

**Piled Foundation Systems**
Helifix Dixie Micro-Pile circular hollow section piles provide rapid and reliable structural support to a building’s foundations following subsidence and can also act as a piled foundation system for either permanent or temporary new-build construction.
